EDUCATION

Bulacan State University

Bachelor of Science in Information Technology, Cum Laude (GWA: 1.6)

Bulacan, Philippines

Jul 2025

EXPERIENCE

Philippine Savings Bank (PSBank)

Software Engineer

Makati City, Philippines

Jun 2026 – Present

Stack: C# .NET Core, Oracle 19c, PL/SQL, React.js, TypeScript, Node.js, PM2

- Develop and maintain the Supplier E-Portal (SEP), the bank's supplier and contract management system, owning contract computation logic and invoice syncing with other internal banking tools.
- Implemented backdated daily-rate support across Oracle PL/SQL packages, reworking the maker-checker approval flow to archive superseded rates before update and preserve a complete audit history.
- Built a TypeScript validator for contract CSV uploads covering required columns, date parsing, backdated-date rejection, and duplicate detection against staged records, catching bad data before it reaches the database.
- Resolved a token-refresh race condition in the Node.js API proxy by adding a server-side token cache with single-flight deduplication, stabilizing sessions under PM2 cluster mode.

Land Registration Systems Inc.

Junior Full-Stack Developer

Quezon City, Philippines

Feb 2025 – Jun 2026

Stack: C# .NET Core, Dapper, Angular 20, AngularJS, Next.js, MSSQL, Sybase, Sequelize, GitLab CI/CD

- Shipped a PRMS automation module serving 200+ Land Registration Authority branches with auto-generated procurements, consumption-based stock monitoring, and configurable real-time stock alerts, cutting manual procurement work by ~50%.
- Built a centralized API response decoder for a third-party payment gateway integration and a cron server that automatically recovers up to 10 missed transactions per day, eliminating manual intervention.
- Engineered an item loss tagging system that blocks lost assets from progressing through procurement workflows, removing a manual reconciliation step and creating an audit trail for central office officers.
- Migrated legacy AngularJS screens to Angular 20 with reusable Angular Material components (data tables, dropdowns, file inputs, breadcrumbs, sidenav), backed by Sybase stored procedures for server-side pagination, sorting, and search.

Raksquad Tech

Full-Stack Developer (Contract)

Remote

Jul 2023 – Jan 2024

Stack: Next.js, Node.js, Express.js, MongoDB, Socket.IO, MUI, Digital Ocean

- Architected and delivered Truesight, a real-time image transaction platform for theme parks with an in-app editing interface, stress-tested to handle 10 concurrent processors uploading 200+ photos simultaneously from mobile.
- Implemented real-time photo delivery and transaction state sync via Socket.IO, enabling instant digital purchases for multiple customers at once and reducing dependency on physical booths.

Iona Innovations Labs

Full-Stack Developer (Contract)

Remote

Oct 2022 – Apr 2023

Stack: Next.js, React.js, TypeScript, Node.js, Express.js, MongoDB, GraphQL, Auth0, React Native

- Owned backend API development for a live job-matching platform for medical professionals, including RBAC-controlled endpoints and Auth0 integration, shipped to production within 2 months.

INDIE APPS AND PROJECTS

Director | Swift, SwiftUI, ScreenCaptureKit

director-app.pages.dev

- Built and sell a macOS screen recorder that edits as you record: automatic zooms, a smoothed cursor and a polished finish.

LidLogic | Swift, IOKit HID, Core Animation

lidlogic.pages.dev

- Built and sell a menu-bar app that reads the MacBook hinge sensor to blur and dim the screen as the lid closes, at ~0.5% CPU.

Clipper | Swift, WhisperKit, Vision, Claude API

In development

- macOS app that turns long videos into captioned vertical clips, with on-device transcription and Claude choosing the highlights.

NAVQMS: Admin Portal and Client App | Node.js, React.js, PostgreSQL, Sequelize, Shadcn, Zustand

Apr 2024 – Oct 2024

- Built a multi-tenant license and access-control portal with per-company databases, plus the client app for core QMS workflows.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, Swift, SQL, PL/SQL, PHP

Frontend: React.js, Next.js, Angular 20, AngularJS, Angular Material, React Native, SwiftUI, Tailwind CSS, MUI, Shadcn

Backend: Node.js, Express.js, C# .NET Core, Dapper, Laravel, REST APIs, GraphQL, Socket.IO, BullMQ

Databases: Oracle 19c, PostgreSQL, MSSQL, Sybase, MySQL, MongoDB, Redis, Prisma, Sequelize, Drizzle

AI: Claude API, OpenAI API, Claude Code, MCP (Model Context Protocol), multi-agent workflows, LLM prompt pipelines

DevOps and Auth: GitLab CI/CD, Digital Ocean, PM2, NGINX, JWT, Auth0, RBAC
