Summary

Full-stack web developer specializing in MERN stack with experience in scalable, real-time systems for government and enterprise clients. Delivered production-ready applications in both startup and internship settings

Education

Bulacan State University

July 2025

Bachelor of Science in Information Technology

Experience

Land Registration Systems Inc.

Feb 2025 - May 2025

Full-stack Developer (Internship, Quezon City, PH)

Tech Stack: Next.js, Tailwind, C# .NET, MSSQL, Gitlab CI/CD, Sequelize ORM

- Led a team of interns in developing a cashless payment system under the supervision of a senior developer.
- Developed a fallback **cron job server** running twice daily to catch and reprocess missed transactions, enhancing fault tolerance and reducing manual recovery efforts.
- Gained hands-on experience in DevOps by scripting CI/CD pipelines using **GitLab CI/CD**. Configured automated build, test, and deploy workflows for staging environments, including job orchestration, environment variables, and lifecycle monitoring.
- Collaborated in agile sprints, participating in weekly code reviews and task breakdowns.

Raksquad Tech

July 2023 - January 2024

Full-stack Developer (Remote, Part-time)

Tech Stack: Next.js, MUI, Node.js, Express.js, MongoDB, DigitalOcean

- Developed Truesight, a real-time image transaction platform for recreational and theme parks.
- Built and deployed the system using Next.js, Node.js, MongoDB, and Socket.IO on DigitalOcean Droplets.
- Enhanced customer experience by enabling digital photo purchases, minimizing dependency on on-site booths.

Iona Innovations Labs

October 2022 - April 2023, resumed Jan 2025 - Present

Full-stack Developer (Remote, Part-time)

Tech Stack: Next.js, React.js, Tailwind, Node.js, Express.js, MongoDB, Auth0, Typescript, React Native

- Actively contributed to main development across multiple projects, while also leading the implementation of POCs and third-party integrations to enhance and validate system capabilities.
 - Engineered secure RESTful and GraphQL APIs with role-based access control (RBAC) using JWT authentication. Configured token verification and protected routes server-side to enforce access rules and prevent unauthorized access
 - Maintained consistent and scalable MongoDB schema designs, ensuring seamless frontend-backend integration.
 - Participated in frontend development to build responsive UI components as needed.
 - Contributed to scalable solutions, adhering to best practices in both design and code architecture.
-

Relevant Projects

Barangay Management System

Tech Stack: MERN (MongoDB, Express.js, React.js, Node.js)

- Designed to automate and digitize barangay operations for over 2,000 residents.
- Features: resident records, document/form generation, census analytics.
- Reduced paperwork by 70%, significantly improving operational efficiency.

ScholarPass (Capstone)

Tech Stack: MERN (MongoDB, Express.js, React.js, Node.js)

- Built a QR code-based gate pass system for managing entry of students and visitors.
- Architected for scalability and reliability, supporting concurrent users.
- Scheduled for university-wide implementation to enhance campus security, targeting over 4,000 students.

NAV QMS Admin Portal

Tech Stack: Node.js, React.js, Shadcn, MUI, PostgreSQL, Zustand , Sequelize ORM

- Developed a centralized **admin dashboard** for managing licenses and access control of multiple subscribed companies.
- Integrated **dynamic company linking**, including per-company database credentials, system configurations, and real-time license tracking.
- Implemented scalable notification and alert systems to improve **license lifecycle visibility** and operational transparency.
- Designed with **modular architecture** to support multi-tenant environments, ensuring future-proof scalability and maintainability.

NAV QMS (Quality Management System)

Tech Stack: Next.js, TanStack Query, MUI

- Contributed to a compliance tracking system for a US-based client.
- Focused on UI/UX development, building reusable components and integrating APIs.
- Improved workflow efficiency by delivering modular, user-friendly interfaces.
- Delivered reusable components and API integrations, improving development efficiency.

Technical Skills

- **Backend:** Node.js, Express, C# .NET, REST APIs, GraphQL
- **Frontend:** React.js, Next.js, React Native, MUI, Tailwind
- **Database:** MongoDB, PostgreSQL, MSSQL, Sequelize ORM
- **DevOps:** GitLab CI/CD, DigitalOcean, PM2
- **Languages:** TypeScript, JavaScript, Java, C#, Python, PHP
- **Auth:** JWT, Auth0
